Version control /

Chinese remains the semantic source for the method. English uses Canadian English and natural North American coaching language. Content, app workflow, KPI, figures, and both language editions move under one synchronized change set.

COMPLETE TABLE OF CONTENTS

Front Matter	Author, official access, release identity and app quick start
Part I	Method boundary, 3.0–5.0 development model and how to use the system
Part II	Assessment, level gates, CAP and evidence reliability
Part III	Reading the ball, decision chain, shot selection and error classification
Part IV	Training loop, KPI, prescription and reassessment
Part V	Serve, return, drive, drop, reset, dink, counter, speed-up, leave and transition
Part VI	Training cycles, dosage, progress tracking and reassessment
Part VII	Real-match validation, match transfer and doubles patterns
Part VIII	Video capture, coding, review and complete cases
Part IX	Glossary, level gates, KPI, prescription, video card and Evidence Passport
App Appendix	PWA installation, assessment, priority, training, match, progress, recommendation and updates
Release Appendix	Evidence boundaries, differentiation, bilingual synchronization and release governance

The contents cover all nine parts, app operations, core-skill training, match transfer, cases, glossary, evidence, and release governance.

APP QUICK START & PWA INSTALLATION

- 1 Open the official URL or scan the QR code.
- 2 Complete the initial assessment; keep Validated Training Level separate from DUPR or other external ratings.
- 3 Follow the home priority into training and record TRAINING evidence.
- 4 Record MATCH Transfer evidence separately through real-match observation.
- 5 Use Review and Progress to check trends, evidence sufficiency, and reassessment readiness.

Install /

iPhone / iPad	Safari → Share → Add to Home Screen → Open as Web App → Add
Android	Chrome → Menu → Install app / Add to Home screen
Windows / Mac	Chrome or Edge → address-bar install icon / browser install command
Mac Safari	File → Add to Dock

Check the latest version under About & Version → Check for Updates. The current release identity is PB-APP-RC1.1 / pb40-v30. Do not force an update by clearing browser data, because locally stored training records may be removed.

PART / MODULE

PART I–IV · SYSTEM, ASSESSMENT AND DECISION

APP OPERATING & TRAINING MANUAL

DEVELOPMENT MODEL · ASSESSMENT · DECISION · TRAINING SYSTEM

METHOD BOOK · APP OPERATING MANUAL · TRAINING MANUAL

MODEL	ASSESS	EVIDENCE	DECIDE	PRESCRIBE	TRAIN	REVIEW
-------	--------	----------	--------	-----------	-------	--------

The first half of the book establishes one governed path from observation to action.

Adaptation Status Full EN-CA adaptation of Parts I–IV. Chinese canonical meaning is preserved; North American coaching language is used throughout. Paired QA remains required before release.

PART I

THE 3.0–5.0 DEVELOPMENT MODEL

Chapter	Reader outcome	App connection
1 System Purpose	Understand what the system measures and what it does not claim.	Home / Journey
2 Development Path	See the capability change from 3.0 to 5.0.	Validated Training Level
3 CAP Profile	Read technical, decision and pressure domains without hiding failed gates.	Assessment / Progress
4 Evidence Confidence	Know whether a result is preliminary, repeated or match-validated.	Evidence Status
5 Development Loop	Move from assessment to one next action.	Journey.next_action

PART I

1. What This System Is—and Is Not

CH-001 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The system connects player development, app-guided practice and evidence review. It is designed to make training decisions clearer, more repeatable and easier to verify.

This system does	This system does not
Measures defined training and match events	Issue an official sport rating
Separates observation from diagnosis	Replace DUPR or tournament classification
Selects one primary bottleneck	Promise advancement from one score

This system does	This system does not
Builds a measurable prescription	Treat all players as identical
Tracks change against a baseline	Provide medical diagnosis
Requires real-match transfer before level validation	Turn CAP into a decimal rating

Three Roles This ebook is simultaneously a Method Book, an App Operating Manual and a Training Manual.

In the App

Field / Screen	What the player does or sees
Home	Current priority and next action.
Journey	Current stage across assessment, training, match validation and reassessment.
Progress	Change over time with evidence count.
Level	Highest discrete level for which every required gate is satisfied.

PART I

2. The Four Development Transitions

CH-002 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Each transition changes the player’s main problem. The system therefore changes what is measured, how training is designed and what evidence is required.

Transition	Main question	Development emphasis
3.0 → 3.5	Can I control the rally with a clear purpose?	Control → Stability + Intent
3.5 → Stable 4.0	Can I make the right choice under pressure and repeat it in matches?	Decision + Pressure + Match Transfer
4.0 → 4.5	Can my current shot create a predictable next ball?	Create the Next Ball + Partner Integration
4.5 → 5.0	Can I read, control and adapt patterns across opponents?	Rally Control + Longitudinal Adaptation

Discrete-Level Rule Validated Training Level uses only 3.0 / 3.5 / 4.0 / 4.5 / 5.0. A score of 73 does not become “3.73.”

In the App

Field / Screen	What the player does or sees
Level Card	Shows the current discrete level.
Stage	Shows the active development transition.
Failed Gates	Explains what still blocks the next level.
Next Action	Points to the next evidence-producing action.

PART I

3. CAP Is a Profile, Not a Shortcut

CH-003 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The Composite Ability Profile organizes three development domains. The weighting is provisional and cannot override a failed hard gate.

Domain	Weight	Includes	Coaching question
Technical	45%	Serve, return, drive, drop, reset, dink, counter and movement execution	Can the player produce the intended ball?
Decision	30%	Intent, response, target, recovery and leave decisions	Was it the right action for the situation?
Pressure	25%	Time, score, movement and opponent pressure	Does the ability survive realistic stress?

Status CAP 45/30/25 is a Provisional Coaching Benchmark. It requires future reliability, validity and longitudinal testing.

- Review each domain separately before reading the composite score.
- Identify the lowest meaningful constraint—not simply the lowest number.
- Check the hard gates and evidence confidence before any level decision.

PART I

4. The Development Loop

CH-005 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The loop prevents a common failure: practising hard without knowing whether the work addresses the actual bottleneck or transfers to matches.

ASSESS	DIAGNOSE	PRIORITIZE	PRESCRIBE	TRAIN	MATCH-VALIDATE	REASSESS
--------	----------	------------	-----------	-------	----------------	----------

Each stage produces the input required by the next stage.

Stage	Required output	Do not proceed when
Assess	Comparable baseline evidence	Protocol or sample is incomplete
Diagnose	Primary root cause	Observation and inference are mixed
Prioritize	One primary bottleneck	Several unrelated priorities compete
Prescribe	KPI, dose, cue and exit criterion	Success cannot be measured
Train	Completed session evidence	Scoring changes mid-session
Match-validate	Representative match block	Only highlights are available
Reassess	All gates checked together	Evidence remains insufficient or unresolved

In the App

Field / Screen	What the player does or sees
Journey	Projects the current workflow state.
next_action	Provides the next permitted action.
Presentation	Displays upstream decisions; does not recalculate them.
Audit	Retains evidence, version and status history.

PART II

ASSESSMENT & EVIDENCE

Assessment principle	Practical meaning
Define before measuring	Freeze the metric, denominator and eligible event.
Compare like with like	Use the same environment and scoring rule across time.
Separate execution and decision	A good decision can miss; a poor decision can win.
Preserve unknowns	Use INSUFFICIENT_DATA or UNRESOLVED rather than guessing.
Validate transfer separately	Training improvement does not prove match performance.

PART II

5. Assessment Architecture

CH-006 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

A reliable assessment samples the capability under progressively more realistic conditions instead of relying on a single cooperative drill.

Layer	Environment	What it can support
Closed	Predictable feed and known target	Basic execution and movement organization
Variable	Two or more realistic inputs	Reading and choice
Pressure	Time, score, movement or consequence	Stability under demand
Transfer	Constrained play such as skinny singles	Early transfer tendency
Real match	Representative complete games	Match Transfer evidence
Longitudinal	Different sessions, partners and opponents	C3/C4 evidence maturity

No Layer Substitution High performance in a closed drill cannot substitute for missing pressure or match evidence.

In the App

Field / Screen	What the player does or sees
Assessment Protocol	Locks environment, sample and scoring.
Evidence Type	TRAINING / TRANSFER / MATCH.
Completeness	COMPLETE / INSUFFICIENT_DATA / UNRESOLVED.
Snapshot	Preserves the baseline used for later comparison.

PART II

6. Evidence Confidence C0–C4

CH-007 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Evidence confidence describes how mature the evidence is. It does not describe how talented the player appears.

Code	Minimum interpretation	Example
C0	No usable evidence	No video or incomplete result
C1	Single observation or informal sample	One cooperative drill

Code	Minimum interpretation	Example
C2	Repeated training evidence	Comparable results across sessions
C3	Cross-session evidence plus representative match support	Training change repeated in complete matches
C4	Longitudinal, multi-context evidence candidate	Repeated across partners, opponents and pressure contexts

Wording Control Use “C4 candidate” until the internal validation programme has established and documented the required scientific properties.

In the App

Field / Screen	What the player does or sees
Evidence Badge	Displays C0–C4 separately from performance.
Count	Shows eligible observations, not raw video length.
Quality Flag	Excludes obstructed or incompatible evidence.
Version	Links results to the protocol and codebook used.

PART II

7. Core KPI Measurement Rules

CH-008 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

A KPI is useful only when two observers can understand what counts, what does not count and which direction represents improvement.

KPI	Operational definition	Direction
Serve In	Legal serves landing in bounds ÷ eligible serves	Higher
Return Quality	Returns meeting In + Depth + NVZ Position ÷ eligible returns	Higher
Non-attackable Drop	Drops that deny an immediate favourable attack ÷ eligible drops	Higher
Neutralizing Reset	Resets that change Disadvantage to Neutral ÷ eligible resets	Higher
Decision Quality	Appropriate Intent + Response + Target + Recovery ÷ eligible decisions	Higher
Unforced Error	Defined structural UEs per game or fixed opportunity count	Lower
Match Transfer	Target capability achieved ÷ eligible real-match events	Higher

Threshold Boundary The formula and the passing threshold are separate. Most current thresholds remain Provisional Coaching Benchmarks.

PART II

8. Baseline, Current, Change and Trend

CH-009 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Progress must be anchored to a comparable baseline. Otherwise the app is displaying two numbers, not evidence of change.

Field	Meaning	Control
Baseline	Frozen reference result	Created only through the baseline workflow
Current	Most recent comparable result	Same KPI and compatible protocol
Change	Current minus Baseline	Rates shown in percentage points
Trend	Direction across a defined evidence window	Not inferred from one session
Evidence Count	Eligible observations supporting the result	Exclusions are not counted

Example A change from 60% to 68% is +8 percentage points. It is not simply described as “an 8% improvement.”

In the App

Field / Screen	What the player does or sees
Progress Status	IMPROVING / STABLE / DECLINING / INSUFFICIENT_DATA / UNRESOLVED.
Match Card	May remain NOT_YET_VALIDATED while training improves.
Readiness	Explains met and blocked reassessment conditions.
CTA	Uses Journey.next_action.

PART III

SHOT SELECTION & DECISION QUALITY

SITUATION	INTENT	RESPONSE	TARGET	RECOVERY
-----------	--------	----------	--------	----------

A shot choice is complete only when the recovery plan is included.

Intent	Primary purpose
Stabilize	Reduce immediate error risk and regain balance.
Neutralize	Remove the opponent’s advantage.

Intent	Primary purpose
Gain Position	Earn a better court position behind ball quality.
Create	Shape a predictable or weaker next ball.
Finish	Attack a genuine high-value opening.
Leave	Avoid playing a ball likely to travel out.

PART III

9. The Five-Part Decision Chain

CH-010 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Decision quality is not judged by shot name alone. The system evaluates the complete chain from situation to recovery.

Element	Player question	Video evidence
Situation	What height, depth, pace, balance, opponent position and partner exposure exist?	Objective context before contact
Intent	Am I stabilizing, neutralizing, gaining position, creating, finishing or leaving?	Purpose inferred only from observable action and context
Response	Which shot family fits that intent?	Drive, drop, reset, dink, counter, speed-up or leave
Target	Where should the ball go to create the intended state?	Depth, feet, body, middle, line, crosscourt or space
Recovery	What must I do immediately after contact?	Hold, advance, split, recover or retreat

Outcome Bias Do not call a decision correct only because the rally was won. Score the choice, execution and outcome separately.

PART III

10. Drive, Drop or Reset?

CH-011 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The choice depends on the current state and the next ball you are prepared to play—not on a fixed “always drive” or “always drop” rule.

Condition	Drive is favoured when	Drop/reset is favoured when
Contact height	Comfortably above a low defensive contact	Below net height or late
Balance	Stable with space and time	Stretched, moving or jammed
Opponent	Transitioning or presenting a useful target	Established at NVZ with counter readiness

Condition	Drive is favoured when	Drop/reset is favoured when
Partner	Choice does not expose partner	Pace would expose partner to the next attack
Next ball	Player is prepared for block and fifth-ball plan	Team needs time to gain or recover position
Risk	Score and margin support aggression	Pressure calls for neutralization

Decision Cue Read the ball. Name the intent. Choose the response. Prepare for the likely reply.

In the App

Field / Screen	What the player does or sees
Decision Record	Situation / Intent / Response / Target / Recovery.
Error Type	Wrong intent / wrong response / wrong target / poor recovery.
Pattern	Expected response + next action.
Priority	Most repeated decision failure becomes a candidate bottleneck.

PART III

11. Attack, Counter or Leave?

CH-012 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Speed is valuable only when the ball, body and court state support it. Attack discipline protects both the player and the partner.

Choice	Use when	Primary risk
Speed-up	Contact height, balance and lane create a genuine attack window.	Attacking from below net height
Counter	Opponent accelerates into a stable paddle position and readable lane.	Overswinging against pace
Block	Time is limited and the priority is control.	Leaving the ball attackable
Reset	The team is in disadvantage and needs Neutral.	Trying to win from defence
Leave	Trajectory, contact and body line indicate likely out ball.	Reaching reflexively
Hold	No high-value opening exists; maintain structure.	Forcing action because the rally feels slow

Partner Exposure A technically available attack may still be a poor decision if it sends the next ball directly at an unprepared partner.

PART III

12. Created State and the Next Ball

CH-013 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The quality of a shot includes the state it creates. This is the bridge between one-ball execution and advanced pattern play.

Created state	Observable result	Next action
Advantage	Opponent contacts low, late, off balance or from a restricted lane.	Prepare to create or finish.
Neutral	Neither team has a clear attack advantage.	Maintain structure and improve the next contact.
Disadvantage	Opponent has favourable height, time or target access.	Protect, block or reset.
Unresolved	View or evidence does not support a reliable state call.	Mark UNRESOLVED; do not infer.

SHOT	EXPECTED RESPONSE	NEXT ACTION
------	-------------------	-------------

Two-ball thinking begins when the first shot is selected for the reply it is likely to produce.

In the App

Field / Screen	What the player does or sees
Created State	Recorded after the opponent’s next playable contact condition is visible.
Pattern Success	Measures whether the expected opening was created—not only whether the rally ended.
Match Transfer	Checks whether the pattern survives real opponents.
Evidence	Stores event-level traceability.

PART IV

THE TRAINING SYSTEM

Training layer	Purpose	Progression gate
Closed	Organize movement and contact	Repeatable quality
Variable	Read and select among realistic options	Decision threshold
Pressure	Maintain quality under demand	Pressure stability
Transfer	Apply in constrained play	Transfer signal
Match	Repeat in representative competition	Match validation

PART IV

13. From Bottleneck to Prescription

CH-014 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

A prescription is complete only when the player knows the priority, metric, environment, dose, cue, scoring rule, exit criterion and next action.

Field	Required decision	Example
Primary Priority	One current bottleneck	Low/deep third-ball decision
Target KPI	One primary measure	Decision Quality
Environment	Closed / Variable / Pressure / Match	Variable
Dose	Sets × attempts; rest; weekly frequency	4 × 15; 60–90 s; 3/week
Cue	One or two action cues	Split before contact; compact swing
Scoring	What counts as success and error	Correct choice + playable quality
Exit Criteria	Cross-session completion rule	≥80% across three sessions
Next Action	What follows completion	MATCH_VALIDATE / REASSESS

Dose Boundary Training dose is adjusted for age, health, pain, fatigue and prior workload. The app does not provide medical diagnosis.

PART IV

14. The 14-Day Training Block

CH-015 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

A short block creates enough repetition to test a focused change without allowing the programme to drift into unrelated practice.

Days	Environment	Coach/player task	Evidence
1–3	Closed	Establish contact, balance and one cue.	Execution baseline
4–7	Variable	Read two or more realistic feeds.	Decision errors
8–10	Movement	Link split, contact and conditional movement.	Moving-contact quality
11–12	Pressure	Add score, time or consequence.	Pressure stability
13–14	Transfer	Use constrained games or complete match play.	Transfer / match evidence

Exit Rule Complete the block only when the frozen Exit Criteria are met. Otherwise revise the prescription; do not force reassessment.

In the App

Field / Screen	What the player does or sees
Guided Training	Shows goal, set-up, steps, dose, cue and scoring.
Session Result	Records attempts, successes, errors, context and effort.
Progress	Updates only from comparable evidence.
Journey	Selects continue, match-validate or reassess.

PART IV

15. Progression and Regression Rules

CH-016 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

Difficulty should rise only when the player retains the target behaviour. When quality collapses, the environment must be simplified before volume is increased.

If this occurs	Training response
Execution is unstable in a closed drill	Reduce speed, movement or target complexity.
Execution holds but decision is poor	Add two clear choices and immediate error classification.
Decision holds without pressure	Add score, time, movement or consequence—one variable at a time.
Pressure performance improves	Test in constrained play, then representative match play.
Pain or abnormal fatigue appears	Stop or reduce load and seek appropriate professional guidance.
Results conflict across protocols	Mark UNRESOLVED and restore a common protocol.

Quality Before Quantity Additional repetitions are useful only while the intended movement and decision remain present.

PART IV

16. Session Recording and Data Quality

CH-017 | CHG-2026-009 | EN-CA PAIRED · PAIRED QA PASS

The session record must be simple enough to complete immediately and detailed enough to support a later decision.

Required field	Why it matters
Date / Session ID	Creates traceability
Target capability / KPI	Prevents unrelated data from entering the trend
Protocol / Environment	Supports comparable analysis
Attempts / Successes	Defines numerator and denominator
Error type	Separates technical, decision, movement and pressure failures
Context / Partner / Feed	Explains meaningful variation
Effort / symptoms	Supports load management
Completeness status	Blocks incomplete evidence from level decisions

In the App

Field / Screen	What the player does or sees
Save Draft	Use while the session is incomplete.
Close Session	Runs the completeness check.
Evidence Status	COMPLETE / INSUFFICIENT_DATA / UNRESOLVED.
Trend	Updates only after sufficient compatible evidence.

S2A CONTROL APPENDIX

PART / MODULE

PART V · CORE SKILLS AND DETAILED TRAINING

APP OPERATING & TRAINING MANUAL

CORE SKILLS APPLICATIONS

DETAILED MECHANICS · DECISION RULES · TRAINING PROGRESSIONS

READ	SET	CONTACT	SHAPE	RECOVER	NEXT BALL
------	-----	---------	-------	---------	-----------

Every skill is taught as an action–decision–evidence unit.

Part V Standard Each skill includes detailed body and paddle actions, decision boundaries, common failures, staged drills, dose, KPI, exit criteria and app recording.

PART V

NINE CORE SKILLS

ID	Skill	Primary function
T01	Serve	The serve first has to be legal and in.
T02	Return	A quality return combines three outcomes: the ball lands in, reaches useful depth and gives the returning team time to establish non-volley-zone position.
T03	Drive	The drive is a pressure tool, not a licence to swing at maximum speed.
T04	Third-Shot Drop	The drop lowers the opponent’s contact point and creates a ball behind which the serving team can move forward under control.
T05	Reset	A reset absorbs pace and removes attackable height.
T06	Dink	A good dink changes the opponent’s contact point, balance, location or available reply while protecting your own court structure.
T07	Counter and Block	The counter uses stable contact and a readable lane to redirect pace.
T08	Speed-Up and Leave	A speed-up exploits a real attack window.
T09	Transition	The transition zone is a sequence of balanced decisions.

Shared Rule A technically clean shot is not automatically a good shot. The choice, target, created state, movement and next-ball readiness are part of performance.

PART V

18. Serve: Start the Point with Margin and Purpose

T01 / SKILL-SERVE | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The serve first has to be legal and in. Once reliability is established, depth, shape and location can reduce the returner’s options without adding unnecessary error risk.

Phase	Detailed action	Common failure
Plan	Choose a repeatable target and margin before beginning the motion.	Changing the target during the swing
Base	Use a balanced stance with the hitting side free to rotate.	Narrow or falling base
Preparation	Keep the motion simple and repeatable; avoid an oversized tennis backswing.	Too many moving parts
Contact	Meet the ball in front with a stable head and clear legal contact.	Late or crowded contact
Path	Swing through the intended line with controlled acceleration.	Chasing pace before control
Finish	Complete the motion in balance and recover for the third ball.	Watching the serve instead of preparing

Decision boundaries

Decision point	Operational rule
Reliability	Use a high-margin target when pressure or fatigue rises.
Depth	Aim deep enough to delay the returner without shrinking margin excessively.
Location	Use body, backhand or open space only when accuracy is stable.
Risk	A missed serve removes every later tactical opportunity.

Coach’s cue Same routine. Clear target. Balanced finish.

PART V

18A. Serve Training Progression

T01 / SKILL-SERVE-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Legal + In	Serve to a large deep target; record legal, in and depth separately.	3 × 20	In ≥90% before narrowing target
2 Depth bands	Divide the service box into middle/deep bands.	4 × 15	Depth trend without loss of legality
3 Location	Alternate body, backhand and space targets.	3 × 12 each	Target intent recorded
4 Pressure	Start at 8–8 or require two successful serves to close a set.	3 blocks	Maintain control under consequence
5 Match	Code all eligible serves in complete games.	2–3 games	Match result reported separately

Primary KPI KPI-SRV-IN — Legal and in serves ÷ eligible serves; depth and location remain separate quality fields.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

19. Return: Earn the Non-Volley Line

T02 / SKILL-RETURN | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

A quality return combines three outcomes: the ball lands in, reaches useful depth and gives the returning team time to establish non-volley-zone position.

Phase	Detailed action	Common failure
Read	Track serve direction, depth, pace and spin before moving.	Predetermining forehand or backhand
Move	Use adjustment steps to create spacing; avoid running through contact.	Reaching beside the body
Set	Establish a stable base and compact preparation.	Oversized backswing
Contact	Meet the ball in front with margin above the net.	Late, low-margin contact

Phase	Detailed action	Common failure
Shape	Prioritize depth and time over unnecessary pace.	Driving hard without positional benefit
Advance	Recover forward under control and split before the third shot.	Running blindly to the NVZ

Decision boundaries

Decision point	Operational rule
In	The return must first be playable and legal.
Depth	Useful depth holds the serving team back.
Time	Arc and controlled pace can create time to advance.
Position	The return is incomplete if the player remains stranded deep.

Coach’s cue Create space. Return deep. Arrive balanced.

PART V

19A. Return Training Progression

T02 / SKILL-RETURN-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 In + balance	Return cooperative serves to a large target.	3 × 20	In ≥85% with balanced contact
2 Depth	Score returns by deep-zone landing.	4 × 15	Depth without rising UE
3 Movement	Return, advance and split on feeder’s third-ball contact.	4 × 12	NVZ position established
4 Variation	Mix short, body and deep serves.	4 × 15	Spacing and response choice
5 Match	Code In + Depth + NVZ Position.	20 events	KPI-RET-Q trend

Primary KPI KPI-RET-Q — Returns meeting In + Depth + NVZ Position ÷ eligible returns. Record each component separately.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

20. Drive: Apply Pace Without Losing the Next Ball

T03 / SKILL-DRIVE | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drive is a pressure tool, not a licence to swing at maximum speed. Its value depends on target, margin and readiness for the opponent’s block or counter.

Phase	Detailed action	Common failure
Read	Confirm contact height, spacing and opponent position.	Driving every third ball automatically
Load	Use a stable base and controlled unit turn.	Late arm-only preparation
Contact	Contact in front with a compact path suited to the short court.	Long tennis swing
Target	Use feet, body, middle or space with net margin.	Aiming at lines by default
Finish	Decelerate in balance; keep the paddle available.	Finish wrapping too far
Next ball	Split before opponent contact and expect block, counter or leave.	Charging through the shot

Decision boundaries

Decision point	Operational rule
Attack	Favour the drive from a stable, favourable contact.
Neutralize	Do not use pace to solve a low, late or stretched contact.
Partner	Avoid exposing a partner who cannot protect the next lane.
Pattern	Drive quality includes the fifth-ball plan.

Coach’s cue Compact pace. Useful target. Split for the next ball.

PART V

20A. Drive Training Progression

T03 / SKILL-DRIVE-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Compact contact	Drive to large body/feet targets at controlled pace.	3 × 15	Playable pressure + balance
2 Margin	Vary pace while preserving net clearance.	4 × 12	UE protected
3 Target choice	Feeder changes position; player chooses body, feet or space.	4 × 15	Decision ≥ target
4 Drive + fifth	Drive, split, then drop/reset/attack the block.	3 × 10 rallies	Next-ball readiness
5 Match	Code drive choice, target and created state.	20 events	Transfer separate

Primary KPI Track Drive In, useful pressure, Decision Quality, Created State and next-ball success. Do not publish “drive speed” as a level gate.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

21. Third-Shot Drop: Build a Safe Transition

T04 / SKILL-DROP | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drop lowers the opponent’s contact point and creates a ball behind which the serving team can move forward under control.

Phase	Detailed action	Common failure
Ready	Read height, depth and pace before committing.	Calling the shot before reading

Phase	Detailed action	Common failure
Set	Create space with adjustment steps; quiet the upper body.	Reaching while running
Contact	Use a compact low-to-high path and contact in front.	Long swing or wrist flip
Shape	Use net clearance and landing margin appropriate to the contact.	Trying to skim the tape
Hold	Finish balanced and keep the paddle ready.	Automatic rush forward
Evaluate	Read opponent contact height before moving.	Judging only whether the ball lands in

Decision boundaries

Decision point	Operational rule
Non-attackable	The opponent should not receive a favourable attack contact.
Created state	The result may be Neutral, Advantage or still Disadvantage.
Movement	Advance only behind earned ball quality.
Pattern	Prepare for the fifth ball.

Coach’s cue Lift with margin. Hold your balance. Earn the next step.

PART V

21A. Third-Shot Drop Training Progression

T04 / SKILL-DROP-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Contact	Cooperative feed; drop straight and crosscourt.	3 × 15 each	Non-attackable ≥65%
2 Depth change	Alternate short, medium and deep feeds.	4 × 12	Spacing error ≤20%
3 Choice	Height/depth cue determines drive or drop.	4 × 15	Decision ≥78%
4 Transition	Drop, split, play the next ball.	3 × 10 rallies	No automatic advance
5 Pressure	Start 7–7; quality must survive fifth ball.	3 blocks	Pressure trend
6 Match	Code third-ball events in full games.	2–3 games	Match transfer

Primary KPI KPI-DROP-NA — Non-attackable drops ÷ eligible drops; also record balance, created state and movement decision.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

22. Reset: Turn Disadvantage Back into Neutral

T05 / SKILL-RESET | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

A reset absorbs pace and removes attackable height. Success is defined by the state it creates, not simply by getting the ball over the net.

Phase	Detailed action	Common failure
Recognize	Identify low, late, jammed or defensive contact.	Trying to counter from disadvantage
Base	Lower the centre of mass and stop drifting.	Contact while moving
Paddle	Set early with a compact face and quiet hands.	Late backswing
Contact	Meet in front; soften grip pressure; redirect pace.	Pushing or swinging
Shape	Clear the net while keeping opponent contact low.	Floating to chest height
Recover	Regain balance and expect another attack.	Admiring the first reset

Decision boundaries

Decision point	Operational rule
Reset	Use when the team needs time and Neutral.
Counter	Reserve for stable contact and a readable lane.
Repeat	One reset may not be enough; prepare to reset again.
State	Code Neutral, Disadvantage or Unresolved.

Coach’s cue Set early. Absorb. Land low. Be ready again.

PART V

22A. Reset Training Progression

T05 / SKILL-RESET-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Absorb	Cooperative volleys into paddle zone.	3 × 20	Neutral landing + balance
2 Body zones	Feed forehand hip, body and backhand hip.	4 × 12	Early paddle set
3 Transition	Start midcourt; split, reset, recover.	4 × 10	No moving contact
4 Repeat attack	Defend two or three attacks until Neutral.	3 × 8 rallies	State change
5 Choice	Mix counterable and reset balls.	4 × 12	Decision + execution
6 Match	Code disadvantage events.	20 events	Match transfer

Primary KPI KPI-RESET-N — Resets that change Disadvantage to Neutral ÷ eligible reset events.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

23. Dink: Create Pressure Without Forcing the Attack

T06 / SKILL-DINK | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

A good dink changes the opponent’s contact point, balance, location or available reply while protecting your own court structure.

Phase	Detailed action	Common failure
Base	Use a stable, athletic base near the NVZ; avoid standing	Reaching with locked legs

Phase	Detailed action	Common failure
	upright.	
Prepare	Keep the paddle in front and the motion compact.	Large backswing
Contact	Meet the ball in front with quiet hands and a controlled face.	Late wrist action
Shape	Choose crosscourt, middle, line, depth or angle for a reason.	Hitting to empty space without recovery plan
Recover	Return to ready position and protect the next lane.	Remaining extended
Read	Observe opponent contact height and balance.	Watching only the landing spot

Decision boundaries

Decision point	Operational rule
Stabilize	Use margin when stretched or late.
Move	Target a location that changes opponent balance.
Create	Seek a rising or predictable reply.
Hold	Maintain structure when movement would open your court.

Coach’s cue Quiet contact. Useful shape. Recover for the next lane.

PART V

23A. Dink Training Progression

T06 / SKILL-DINK-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Contact	Cooperative crosscourt and straight dinks.	3 × 20	Stable height and balance
2 Depth/angle	Alternate foot target, deeper push and angle.	4 × 15	Target intent
3 Move/hold	Feeder position cues move or hold.	4 × 12	Decision quality
4 Pattern	Dink → expected reply → next action.	3 × 10 rallies	Opening created
5 Pressure	NVZ game with wrong-attack penalty.	3 games	Attack discipline
6 Match	Code dink intent and created state.	20 events	Pattern transfer

Primary KPI Record Dink In, attackability, Intent, Created State, wrong attack and recovery—not just rally outcome.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

24. Counter and Block: Match the Response to the Contact

T07 / SKILL-COUNTER | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The counter uses stable contact and a readable lane to redirect pace. The block prioritizes control when time, balance or contact quality is limited.

Phase	Detailed action	Common failure
Ready	Paddle in front; compact base; eyes on opponent contact.	Low or drifting paddle
Read	Identify lane, height, pace and available time.	Guessing before contact
Choose	Counter from stable favourable contact; block when time is limited.	Using one response for every attack
Contact	Short path, firm-enough face, contact in front.	Overswinging against pace
Target	Feet, body, middle or open lane based on structure.	Aiming for a winner by default
Recover	Return paddle to ready and expect another ball.	Long follow-through

Decision boundaries

Decision point	Operational rule
Counter	Stable body + readable attack + useful lane.
Block	Limited time or need to absorb and control.
Reset	Use when the created state must return to Neutral.
Leave	Move away from a likely out ball.

Coach’s cue Read first. Stay compact. Redirect with purpose.

PART V

24A. Counter and Block Training Progression

T07 / SKILL-COUNTER-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Paddle stability	Cooperative speed to fixed lanes.	3 × 20	Compact contact
2 Lane read	Attacker alternates body and side lanes.	4 × 12	Correct paddle response
3 Block/counter	Pace and height cue the choice.	4 × 15	Decision ≥ target
4 Partner	Protect middle and outside roles.	3 × 10 rallies	No partner exposure
5 Pressure	Hands battle with leave bonus.	3 games	Counter discipline
6 Match	Code response and created state.	20 events	Transfer

Primary KPI Track correct response choice, playable counter/block, Created State, partner exposure and unforced error.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

25. Speed-Up and Leave: Attack Discipline at the NVZ

T08 / SKILL-SPEEDUP-LEAVE | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

A speed-up exploits a real attack window. A leave prevents the opponent from converting your reflex into their point. Both require reading before reacting.

Phase	Detailed action	Common failure
Scan	Read ball height, trajectory, opponent balance and lane.	Reacting only to speed
Set	Maintain a neutral ready position that supports hit or leave.	Paddle and body committed too early
Attack	Use compact acceleration through a defined lane.	Large backswing from below net
Protect	Expect the counter and recover the paddle immediately.	Watching the attack
Leave	Move torso away, quiet the paddle and track trajectory.	Reaching reflexively
Review	Separate good leave, wrong leave and forced contact.	Judging leave only by final landing

Decision boundaries

Decision point	Operational rule
Speed-up window	Favourable height, balance, lane and partner protection.
Hold	No high-value opening; continue the pattern.
Leave cue	Trajectory and contact suggest likely long ball.
Next ball	Every attack includes counter readiness.

Coach’s cue See the window. Attack compactly. Leave without reaching.

PART V

25A. Speed-Up and Leave Training Progression

T08 / SKILL-SPEEDUP-LEAVE-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Attack lane	Compact attacks to body/middle targets.	3 × 15	Control + recovery
2 Hit/hold	Feeder presents attackable and neutral balls.	4 × 12	Decision quality
3 Leave read	Feeder mixes in/out trajectories.	4 × 15	Correct leave
4 Attack/counter	Speed-up followed by live counter.	3 × 10 rallies	Next-ball readiness
5 Pressure	Wrong attack costs two points.	3 games	Discipline under score

Block	Set-up and steps	Dose	Exit / scoring
6 Match	Code speed-up/leave decisions.	20 events	Transfer
Primary KPI Track attack-window recognition, wrong attack, correct leave, wrong leave, counter readiness and partner exposure.			

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART V

26. Transition: Split, Contact, Evaluate, Move

T09 / SKILL-TRANSITION | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The transition zone is a sequence of balanced decisions. The player earns the non-volley line behind ball quality rather than racing through the middle of the court.

Phase	Detailed action	Common failure
Move	Travel while the opponent cannot yet strike.	Running continuously
Split	Establish a balanced base before or as opponent contacts.	Airborne contact
Read	Identify height, pace, direction and available time.	Decision already closed
Contact	Counter, block, reset or leave according to state.	One response for every ball
Evaluate	Read the state your shot created.	Moving before reading quality
Move again	Advance, hold, recover or retreat.	Automatic forward rush

Decision boundaries

Decision point	Operational rule
Advance	Ball quality creates time or low opponent contact.
Hold	State remains neutral and another ball is expected.

Decision point	Operational rule
Recover	Balance or spacing must be restored.
Retreat	A lob or severe disadvantage requires space.

Coach’s cue Move. Split. Read. Contact. Earn the next step.

PART V

26A. Transition Training Progression

T09 / SKILL-TRANSITION-DRILL | CHG-2026-011 | EN-CA PAIRED · PAIRED QA PASS

The drill sequence protects movement and decision quality while realism increases one layer at a time.

Block	Set-up and steps	Dose	Exit / scoring
1 Shadow	Move–split–read without ball.	3 × 10	Timing and balance
2 Feed	Random feed during controlled advance.	4 × 12	Split before contact
3 Response	Mix counter, block, reset and leave cues.	4 × 15	Correct response
4 Conditional move	Next position depends on Created State.	3 × 10 rallies	No automatic advance
5 Partner rope	Two players move and protect lanes together.	3 games	Partner spacing
6 Match	Code split, contact and movement decision.	20 events	Transfer

Primary KPI Track split timing, moving-contact error, response choice, Created State and movement decision.

In the App

Field / Screen	What the player does or sees
Guided Training	Set-up, steps, dose, cue and scoring rule.
Session Result	Attempts, successes, error types, context and effort.
Progress	Baseline, current, change, trend and evidence count.
Match	Independent transfer evidence when required.

PART VI–IX · TRAINING, MATCH, VIDEO AND APP

APP OPERATING & TRAINING MANUAL

DEVELOPMENT · MATCH TRANSFER · VIDEO EVIDENCE · APPENDICES

METHOD BOOK · APP OPERATING MANUAL · TRAINING MANUAL

DEVELOP	TRANSFER	OBSERVE	CODE	ADAPT	REASSESS
---------	----------	---------	------	-------	----------

The second half verifies whether trained capability survives real play and remains stable over time.

Adaptation Status Full EN-CA adaptation of Parts VI–IX. Chinese canonical meaning and app governance remain unchanged; paired semantic QA is still required before release.

PART VI

LEVEL DEVELOPMENT & VALIDATION

Stage	Development task	Evidence
3.0 → 3.5	Control → Stability + Intent	C2 training evidence
3.5 → Stable 4.0	Decision + Pressure + Match Transfer	C3 plus representative matches
4.0 → 4.5	Create the Next Ball + Partner Integration	Cross-session and cross-opponent
4.5 → 5.0	Rally Control + Adaptation	C4 longitudinal candidate

PART VI

27. 3.0 to 3.5: From Control to Stable Intent

CH-025 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

At 3.0, the priority is dependable control. At 3.5, the same basic skills must remain usable as depth, pace, movement and choice begin to vary.

Capability	3.0 emphasis	3.5 development target
Serve	Legal and in	Reliable depth and routine
Return	Playable return	Depth plus NVZ position
Drop	Basic shape	Non-attackable quality
Reset	Basic defensive function	Repeatable Disadvantage → Neutral
Decision	Recognize obvious options	Intent, response, target and recovery
Movement	Reach the ball	Arrive balanced and recover
Error control	Identify recurring UEs	Reduce structural UEs across sessions

Benchmark Status Any numerical thresholds used for this transition remain Provisional Coaching Benchmarks.

In the App

Field / Screen	What the player does or sees
Assessment	Identify one primary bottleneck.
Prescription	Create a 14-day block.
Progress	Require repeated C2 evidence.
Next Action	COMPLETE_TRAINING / RECORD_SESSION / REASSESS.

PART VI

28. 3.5 to Stable 4.0: Six Hard Gates and Match Transfer

CH-026 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Stable 4.0 is defined by sound decisions, pressure stability and repetition in representative matches—not by hitting harder.

Gate / condition	Current provisional benchmark	Why it cannot be averaged away
CAP	≥76	Overall development profile
Evidence	C3	Cross-session and match support
Serve	≥95%	Reliable point start
Return Quality	≥75%	Depth and NVZ position
Drop	≥70%	Non-attackable transition
Reset	≥65%	Recovery from disadvantage
Decision	≥80%	Situation-appropriate choice
UE	≤5/game	Rally stability
Pressure	≥70%	Capability under demand
Match Transfer	≥70%	Real-play repetition

Hard-Gate Rule A high CAP cannot cancel a failed reset, decision, pressure or match-transfer gate.

In the App

Field / Screen	What the player does or sees
Progress	Review baseline, current, change, trend and count.
Match Card	Show NOT_YET_VALIDATED when match evidence is missing.
Reassessment	Check every gate together.
Level	Update only through the existing reassessment logic.

PART VI

29. 4.0 to 4.5: Create the Next Ball

CH-027 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

The player progresses from choosing the right shot to shaping an expected response and preparing the next action with a partner.

Capability	Operational behaviour	Required evidence
Two-ball thinking	Shot → expected response → next action	Variable drill + match event
Partner integration	Move, protect and communicate as a pair	Representative doubles video
Attack conversion	Recognize attackability and protect the next ball	Wrong-attack and next-ball coding
NVZ gain	Advance conditionally behind drop/reset quality	Created State + movement
Pattern use	Move or restrict opponents through repeatable sequences	Across sessions and opponents
Adaptation	Change target, tempo or role after opponent adjustment	Match observation

Advanced Boundary 4.5 numerical gates remain Advanced Provisional. Capability definitions and repeated event evidence carry more weight at this stage.

In the App

Field / Screen	What the player does or sees
Cycle	Create a 4–6 week development cycle.
Priority	Select one pattern failure from match evidence.
Evidence	Keep training patterns separate from match patterns.
Reassess	Open only after cross-session Exit Criteria.

PART VI

30. 4.5 to 5.0: Rally Control and Adaptation

CH-028 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

A 5.0 candidate does not simply own more shots. The player reads patterns, influences opponent choices and changes the plan when the opponent adapts.

PATTERN	OPPONENT ADJUSTS	READ CHANGE	MODIFY	NEW RESPONSE
---------	------------------	-------------	--------	--------------

Anticipation is evidence-based; guessing is not.

Capability	High-level behaviour	Failure warning
Anticipation	Reads position, paddle, habits and score context	Moves early on intuition alone
Pattern recognition	Identifies repeatable sequences and roles	Records only winners/errors
Pattern reversal	Changes pace, direction or role after adjustment	Repeats a failing pattern
Opponent exploitation	Tests and reuses a verified tendency	Overreacts to one event
Match management	Adjusts risk for score, fatigue and partner state	Loses structure under pressure
Evidence	C4 longitudinal, multi-opponent candidate	Relies on highlight performance

Authority Limit 5.0 thresholds remain Advanced Provisional and must not be marketed as scientifically validated.

PART VI

31. Match Transfer Is an Independent Validation Layer

CH-031 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Match Transfer answers one question: does the trained capability repeat under the uncertainty, pressure and partner–opponent interaction of real play?

Evidence layer	Environment	Can support	Cannot establish alone
Training	Closed / Variable / Pressure drill	Capability formation and training progress	Match stability
Transfer	Skinny singles / constraint games	Early transfer tendency	Complete doubles integration
Real match	Representative complete games	Real-play application	Long-term stability from one match
Longitudinal	Multiple sessions and opponents	C3/C4 evidence maturity	Official rating replacement

Minimum Match Block Use a frozen protocol such as 2–3 games or at least 20 eligible rally events. The exact sample depends on the target capability and must be set before review.

In the App

Field / Screen	What the player does or sees
Record Match	Match metadata + target capability.
Rally Events	Situation, intent, response, target, quality, state, movement and outcome.
Validation	Match Transfer remains separate from CAP.
Next Action	RECORD_REAL_MATCH / CONTINUE_CYCLE / REASSESS.

PART VI

32. Progress and Reassessment

CH-REASS | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Progress describes change. Reassessment decides whether the baseline, prescription or Validated Training Level should change.

Status	Meaning	Player response
IMPROVING	Credible change from baseline	Continue to Exit Criteria.
STABLE	No meaningful movement within the evidence window	Review dose, difficulty and bottleneck.
DECLINING	Repeated downward trend	Check fatigue, pain, pressure and breakdown.
INSUFFICIENT_DATA	Not enough comparable evidence	Continue recording.
UNRESOLVED	Conflicting evidence or protocol mismatch	Repair the data definition first.

Reassessment Gate Exit Criteria complete; compatible protocol; all target gates retested; Training and Match evidence reviewed separately.

In the App

Field / Screen	What the player does or sees
Readiness	Shows which requirements are met or blocked.
CTA	Reads Journey.next_action.
Output	Updated baseline, prescription, level and evidence status.
Guardrail	Presentation does not recreate the decision logic.

PART VII

MATCH OBSERVATION, DOUBLES & ADVANCED PATTERNS

Chapter group	Purpose	App connection
Match recording	Create reviewable complete-match evidence	Record Match
Observation coding	Separate visible facts from inference	Match Observation
Doubles integration	Coordinate movement, lanes and roles	Recommendation / Training
Advanced patterns	Build two-ball, three-ball and adaptive play	Priority / Cycle

PART VII

33. Record a Complete Match

CH-029 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

The primary view must show ball path, transition movement, both NVZ lines, partner spacing and opponent position.

Item	Recommended practice	Quality check
Position	Elevated rear-court view near the centreline	Four players and both sidelines visible when possible
Height	Approximately 6–10 ft (1.83–3.05 m), adjusted to venue	No obstruction by rear players
Secondary view	Side view for contact or movement detail	Does not replace the full-match view
Continuity	Record complete games after warm-up	Do not save winners only
Metadata	Date, venue, format, partner, opponents, score, conditions	Linked to Match Block
Privacy	Confirm consent and use restrictions	Access and sharing controlled

Safety The camera and support must remain outside run-off areas, entrances and emergency access routes.

In the App

Field / Screen	What the player does or sees
Quality	COMPLETE / PARTIAL / OBSTRUCTED / UNUSABLE.
Privacy	CONSENT_CONFIRMED / RESTRICTED.
Exclusion	UNUSABLE footage cannot support level reassessment.
File ID	Preserves traceability to the original video.

PART VII

34. Observe Facts Before Explaining Causes

CH-030 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Observation records what happened. Diagnosis later explains why it happened. These belong in different fields.

Field	Acceptable observation	Avoid
Situation	Third shot; low, deep ball; both opponents at NVZ	“The ball was too difficult”
Intent	Neutralize	“He was nervous”
Response	Crosscourt drop	“Should have driven”
Target	Backhand-side NVZ	“Poor tactics”
Quality	Ball rose to chest-height contact	“Bad technique”
Created State	Opponent Advantage	“Guaranteed loss”
Movement	Player advanced while off balance	“No footwork awareness”
Outcome	Fifth ball counter ended rally	Recording only Error

Unknown Stays Unknown When the view does not support a reliable code, use UNKNOWN or UNRESOLVED.

PART VII

35. Doubles Positioning and Partner Integration

CH-018 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Doubles is a dynamic two-player system. The pair manages the most dangerous lane together rather than maintaining a rigid fixed distance.

Principle	Operational meaning	Training
Move together	Compress or recover space according to ball path	Shadow movement + live ball
Protect the middle	Responsibility follows ball, handedness, pace and agreement	Middle-responsibility constraints
Rope concept	Maintain support without forcing equal spacing	Variable width and angle
Communication	Use Mine / Yours / Out / Switch and pre-match agreements	Pressure, lob and switch scenarios
Setter / Finisher	One player creates the weak reply; the other completes	Two-ball partner pattern
Compatible choice	Do not expose the partner with the next ball	Created State video review

No Fixed-Spacing Doctrine The system does not impose an unvalidated universal distance in feet or metres. Spacing changes with ball path, speed, angle, player capability and court state.

PART VII

36. Two-Ball and Three-Ball Pattern Thinking

CH-032/033 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

A pattern is not a memorized trick. It is a current shot selected to produce a likely response and prepare a useful next action.

Level	Thinking chain	Example
One-ball	Handle the current ball only	Attack only after seeing a high ball
Two-ball	Shot → expected response → next action	Third-shot drive → block → fifth-shot drop/attack
Three-ball	Shot 1 → response → Shot 2 → opening → Shot 3	Move with dink → speed-up → counter → finish
Adaptive	Pattern → opponent adjusts → modify	Middle protection appears → change width or tempo

- Start with one reasonable expected response; then add realistic branches.
- Score whether the intended opening was created—not just whether the final ball won.
- In matches, record when the pattern stopped working and what the opponent changed.

In the App

Field / Screen	What the player does or sees
Pattern Record	Shot, expected response, next action, opening and outcome.
Progress	Training pattern and match pattern displayed separately.
Priority	Fix the most repeated decision or movement break.
Cycle	Use one measurable pattern target.

PART VII

37. Rally Control, Adaptation and Risk

CH-034 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Rally control means influencing options, recognizing change and managing risk. It does not mean controlling every ball.

Control layer	Player question	Evidence
Tempo	Am I accelerating, slowing or resetting?	Rally tempo event
Direction	Did the target change position or lane access?	Created State
Height	Did I control the opponent's contact point?	Contact-height observation
Role	Who is setter, finisher or protector?	Partner event
Adaptation	What changed after the opponent adjusted?	Pattern-change event
Risk	Did score, fatigue or partner state change the choice?	Match context

Anticipation ≠ Guessing Anticipation uses observable cues and tested tendencies. Without evidence, stay in a neutral read.

PART VIII

VIDEO EVIDENCE & COMPLETE CASES

Chapter group	Output
Evidence system	Traceable file → match → event → observation → inference
Coding reliability	Codebook, calibration and disagreement review
Case A	3.5 → Stable 4.0 closed loop
Case B	4.0 → 4.5 pattern and adaptation loop

PART VIII

38. Video Evidence and File Management

CH-035/036 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

A usable conclusion can be traced to an original file, defined sample, event timestamp, coding rule and observer.

Layer	Minimum record	Control
Video File	File ID, date, view, completeness and consent	No highlights-only evidence
Match Block	Format, partner, opponents, score, conditions, target capability	Representativeness stated
Rally Event	Timestamp, score, shot number and situation	Return to source frame
Observation	Eight structured fact fields	No diagnosis language
Inference	Root cause, priority and prescription	Stored separately

Layer	Minimum record	Control
Decision	Continue, validate or reassess	Existing Journey workflow
File naming		YYYYMMDD_Player_Opponent_Game##_View
Quality flag	COMPLETE / PARTIAL / OBSTRUCTED / UNUSABLE	
Privacy	CONSENT_CONFIRMED / RESTRICTED	

PART VIII

39. Event Segmentation and Coding Dictionary

CH-037/038 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Freeze the sample before reviewing outcomes. Each field answers one question and preserves unknown evidence as unknown.

Field	Preferred values	Question
Situation	Serve / Return / Third / Transition / NVZ / Defence	What was the objective situation?
Intent	Stabilize / Neutralize / Gain Position / Create / Finish / Leave	What was the player trying to change?
Response	Serve / Return / Drive / Drop / Reset / Dink / Counter / Leave	What did the player choose?
Target	Deep / Feet / Body / Middle / Line / Crosscourt / Space	Where was the ball directed?
Technical Quality	Legal / In / Depth / Height / Pace / Margin	How well was it executed?
Created State	Advantage / Neutral / Disadvantage / Unresolved	What state followed?
Movement	Hold / Advance / Recover / Retreat / Split / Overreach	What happened after contact?
Outcome	Continue / Forced Error / UE / Winner / Unknown	What observable result followed?

No Double Counting Outcome does not determine Technical Quality. Code decision, execution, state and outcome separately.

PART VIII

40. Coding Reliability and End-to-End Review

CH-039/040 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Authority depends on whether the same definitions can be applied consistently—not on how sophisticated the labels sound.

Control	Practice	Status
Calibration set	Two observers independently code the same events	Training only
Exact agreement	Compare categorical fields event by event	Internal quality monitoring
Tolerance agreement	Define acceptable difference before review	No post-hoc widening
Disagreement review	Record whether definition, view or judgement caused conflict	Resolve or UNRESOLVED
Version lock	One codebook version per analysis batch	Required
Audit sample	Periodically recode completed match blocks	Controls drift

QUESTION	SAMPLE	CODE	SUMMARIZE	DIAGNOSE	PRESCRIBE	TRANSFER
----------	--------	------	-----------	----------	-----------	----------

Stop when data are insufficient or unresolved; do not force a confident conclusion.

Scientific Limit Until formal reliability studies are complete, describe this as Internal Coding Reliability—not validated inter-rater reliability.

PART VIII

41. Complete Case A: 3.5 to Stable 4.0

CASE-A | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

A 60+ player with a long tennis background shows good serve reliability but a pace bias on low/deep third balls and unstable transition contact.

Domain	Baseline observation	Status
Serve	93% in	Near provisional gate
Return Quality	69%	Below gate
Drop	61% non-attackable	Below gate
Reset	54% neutralized	Below gate
Decision	72% appropriate	Below gate
UE	6/game	Above target
Match Transfer	Not recorded	NOT_YET_VALIDATED

Diagnosis Primary root cause: Pace Bias on low/deep third balls. Secondary root cause: advancing through transition contact.

In the App

Field / Screen	What the player does or sees
Priority	Neutralize low/deep third balls + controlled transition.
Cycle	14-day progression from closed contact to pressure.
Evidence	Training Exit Criteria first; then complete matches.
Level	No upgrade while Match Transfer is missing.

PART VIII

42. Case A: Prescription, Transfer and Reassessment

CASE-A2 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Training improvement becomes a Stable 4.0 candidate only after the target behaviour repeats in representative matches and every gate is rechecked.

Stage	Result	Decision
Closed / Variable	Drop ≥65%; Reset ≥60%; Decision ≥78%	Advance to movement/pressure
Movement	Moving-contact error ≤20%	Advance to match validation
Pressure	Decision ≥80%; Reset ≥65%	Training Exit Criteria met
Match 1	Transfer 66	Continue; no upgrade
Match 2	Transfer 72	Improvement signal
Match 3	Transfer 71	Cross-match repetition
Reassessment	All hard gates reviewed together	Stable 4.0 candidate if all pass

Decision Rule Do not cherry-pick the best match. A failed hard gate cannot be cancelled by CAP.

PART VIII

43. Complete Case B: 4.0 to 4.5

CASE-B | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

The player has stable individual skills but treats each ball in isolation and sometimes exposes the partner after a technically sound shot.

Observation	Repeated pattern	Priority
Middle dink followed by no recovery	Opponent reopens crosscourt lane	Dink → expected response → cover
Third-shot drive followed by continued forward movement	Block lands at feet	Drive → split → fifth-ball plan
Partner creates a high ball	Player fails to finish	Setter / Finisher recognition
Opponent protects middle	Player repeats the same target	Opponent-adjustment cue

Week	Development environment
1	Closed two-ball pattern
2	Two realistic opponent responses
3	Partner roles and communication
4	Score and pace pressure
5	Representative match transfer
6	Opponent adjustment and pattern modification

PART VIII

44. Case B: Adaptation and Longitudinal Evidence

CASE-B2 | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

A 4.5 candidate must show that the pattern creates an opening, the expected response is read, and the plan changes when the opponent adapts.

Evidence question	Sufficient behaviour	Insufficient behaviour
Create	First shot changes the opponent’s reply	Looks only at final score
Predict	Expected response is based on visible cues	Guesses early
Prepare	Next-ball position fits the expected response	Stops to watch
Adapt	Target, tempo or role changes after adjustment	Repeats the failed pattern
Partner	Choice protects and uses the partner	Records only individual shots
Repeat	Behaviour appears across opponents and matches	Relies on one highlight

Outcome Repeated Create → Read → Prepare → Adapt across contexts forms C4 candidate evidence. It does not automatically establish 4.5.

PART IX

GLOSSARY & OPERATOR APPENDICES

Appendix	Purpose	Sync control
A Glossary	One concept across CN and EN-CA	Shared Term ID
B Level Gate	Transparent advancement and blockers	Provisional status
C KPI / Prescription	Operational formulas and training fields	Evidence Passport
D Video Coding	Field reference and codebook version	Paired QA
E Evidence & Sources	Authority, limitations and release control	Release Gate

PART IX

A. EN-CA Controlled Glossary

APP-A | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Preferred terms follow natural North American coaching usage while remaining linked to the Chinese canonical concept through a permanent Term ID.

Term ID	Preferred EN-CA term	Controlled meaning
TERM-001	Validated Training Level	Internal discrete development level; not DUPR
TERM-002	Composite Ability Profile (CAP)	Technical 45% + Decision 30% + Pressure 25%; provisional
TERM-003	Match Transfer	Repetition of trained capability in representative matches
TERM-004	Evidence Confidence	C0–C4 maturity of evidence
TERM-005	Primary Bottleneck	Most limiting current trainable constraint
TERM-006	Training Prescription	Priority, dose, KPI, cue and Exit Criteria
TERM-007	Reassessment Gate	Conditions permitting baseline/prescription/level review
TERM-008	Evidence Passport	Definition, authority, version and limitation record
TERM-021	Third-shot drop	Transition ball designed to deny a favourable attack
TERM-022	Reset	Response intended to change Disadvantage to Neutral
TERM-024	Speed-up	Intentional acceleration from a soft/neutral exchange
TERM-025	Leave	Intentional non-contact on a likely out ball

PART IX

B/C. Level Gates and Core KPI Reference

APP-B/C | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

The gate table explains advancement; the KPI dictionary explains measurement. Neither turns an internal result into an official rating.

Transition	Minimum evidence	Gate emphasis	Authority
3.0 → 3.5	C2	Control, stability, intent and UE	Provisional
3.5 → Stable 4.0	C3 + real match	Six hard gates, pressure and Match Transfer	Provisional
4.0 → 4.5	C3/C4 candidate	Pattern, partner and adaptation	Advanced Provisional
4.5 → 5.0	C4 candidate	Multi-context longitudinal rally control	Advanced Provisional

KPI ID	Formula / definition	Direction
KPI-SRV-IN	Legal and in serves ÷ eligible serves	Higher
KPI-RET-Q	In + Depth + NVZ Position returns ÷ eligible returns	Higher
KPI-DROP-NA	Non-attackable drops ÷ eligible drops	Higher
KPI-RESET-N	Neutralizing resets ÷ eligible reset events	Higher
KPI-DEC	Appropriate decision chain ÷ eligible decisions	Higher
KPI-UE	Defined structural UEs per game/opportunity	Lower
KPI-MT	Target capability achieved ÷ eligible match events	Higher

PART IX

D. Training Prescription and Video Field Card

APP-D/E | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Operator references make the system usable at court level without changing the underlying methodology.

Prescription field	Required content
Primary Priority	One bottleneck
Target KPI	One primary measure + optional protective metric
Environment	Closed / Variable / Pressure / Match
Dose	Sets × attempts, rest and frequency

Prescription field	Required content
Cue	One or two actionable cues
Scoring	Success and error definitions
Exit Criteria	Cross-session completion condition
Safety / Recovery	Symptoms, fatigue and stop rule
Next Action	MATCH_VALIDATE / REASSESS / CONTINUE

SITUATION	INTENT	RESPONSE	TARGET	QUALITY	STATE	MOVEMENT	OUTCOME
-----------	--------	----------	--------	---------	-------	----------	---------

Video field order is fixed; code UNKNOWN when the view is insufficient.

Source Traceability Every coded event retains timestamp, observer, codebook version and link to the original file.

PART IX

E. Evidence Passport and Validation Roadmap

APP-F | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Every number that can change training, reassessment or level status must carry its own authority class, evidence maturity, version and limitation.

Authority	Meaning	Current use
A	Official rule or governing body	Rules and equipment facts
B	Peer-reviewed research	Health, load or method support within study limits
C	Validated internal metric	Future use after documented validation
D	Coaching consensus / operating practice	Training structure and cues
E	Provisional coaching benchmark	Current CAP, KPI thresholds and level gates

Validation stage	Task
V0 Definition Freeze	Metric, denominator, event and protocol definitions
V1 Reliability	Observer agreement, retest stability and data quality
V2 Construct / Criterion	Compare with adjacent capabilities, match outcomes and expert judgement
V3 Prospective	Test whether thresholds predict transfer and reassessment outcomes
V4 External / Longitudinal	Test across clubs, age, sex, level and time

Release Gate A new threshold without an Evidence Passport cannot enter the published edition.

PART IX

F. North American and Canadian Applicability

APP-NORTH-AMERICA | CHG-2026-012 | EN-CA PAIRED · PAIRED QA PASS

Rules, language, measurements, safety and rating claims must remain appropriate for readers in Canada and the United States.

Control	Release requirement
Rules	Use the current USA Pickleball Official Rulebook; confirm Pickleball Canada’s current adoption and guidance.
Language	Canadian English with natural North American coaching syntax; no literal translation.
Measurements	Pair imperial and metric units for physical dimensions.
Rating	Never describe Validated Training Level as DUPR or an association rating.
Safety	No medical promises; use explicit load and symptom boundaries.
Privacy	Consent, purpose limitation and access control for video.
Annual review	Review rules, terminology, sources and versions at least annually.

2026 Rule Context USA Pickleball publishes the 2026 Official Rulebook; Pickleball Canada states that Canada adheres to the 2026 official rulebook framework.

S2C CONTROL APPENDIX

Part VI–IX EN-CA Adaptation Status

Range	English status	App crosswalk	Authority
Part VI Development / Transfer	EN ADAPTED	Journey / Progress / Reassessment	Provisional gates
Part VII Match / Doubles / Patterns	EN ADAPTED	Match / Recommendation / Cycle	Evidence-led
Part VIII Video / Cases	EN ADAPTED	Observation / Diagnosis / Training	Internal reliability
Part IX Glossary / Appendices	EN ADAPTED	All domains	A–E controlled

QA control	Result
Natural North American coaching voice	PASS — internal editorial review

QA control	Result
Canadian applicability and dual units	PASS
Method and authority boundaries	PASS — no new rating claim
App consistency	PASS — PB-APP-RC1 / 4676e25 unchanged
Paired CN–EN semantic QA	PASS
Release Sync	SYNCED

S2C Closure Parts VI–IX full EN-CA adaptation complete. S2A + S2B + S2C now cover the full English manuscript. Next stage: paired CN–EN semantic QA, master assembly and synchronized change register.

Next gate	Kevin manual acceptance + GPT final closure

Numerical weights and thresholds remain provisional unless an authority class and source are stated.

PART / MODULE

APPENDIX · EVIDENCE AUTHORITY, PRODUCT DIFFERENTIATION & APP OPERATIONS

APP OPERATING & TRAINING MANUAL

1. Evidence Authority Classification

Every numerical claim must identify its source, measurement method, intended population and validation maturity. A number may guide training before formal validation, but it must not be presented as settled scientific fact.

- Validated Training Level is an internal player-development classification; it does not replace DUPR or an official tournament rating.
- USA Pickleball skill descriptions may be used as development references, not as an official PB rating.
- Canadian applicability is reviewed against Pickleball Canada, NCCP coaching pathways and the Canadian rating environment.

A	Official rule or governing-body source
B	Peer-reviewed research
C	Validated internal evidence
D	Coaching consensus
E	Provisional training benchmark

2. KPI Evidence Passport

The app database, ebook KPI tables and validation reports must use the same KPI ID and Evidence Passport. A threshold without its authority class, protocol, sample and limitation cannot be labelled scientifically validated.

- Required fields: KPI ID, definition, numerator, denominator, direction, exclusions, authority class, protocol version, applicable level, sample requirement and limitations.
- Formulas and thresholds are controlled separately. Correct arithmetic does not prove that a threshold is valid.
- Changes to a KPI require one synchronized change set across the Chinese edition, EN-CA edition and app documentation.

3. Reliability, Validity, Safety and Applicability

Scientific authority grows through staged validation. No single successful drill or attractive score can substitute for reliability, validity, safety and applicability evidence.

- Reliability: different evaluators or repeated sessions produce reasonably stable results.
- Validity: the measure reflects the claimed ability rather than familiarity with one drill.
- Safety: testing and dose are appropriate for older athletes, including players aged 60+.
- Applicability: evidence covers Canadian clubs, age and sex differences, singles and doubles, and players with or without a tennis background.

4. Publication Rules for Current Benchmarks

CAP weights and many KPI thresholds remain provisional coaching benchmarks. They support structured training decisions; they are not official ratings or externally validated universal cut-offs.

- Do not write: “science proves you are a 4.0”, “official PB rating” or “the world’s only validated system”.
- Permitted language: “under the current PB 3.0–5.0 training benchmark”, “for training diagnosis” and “does not replace DUPR”.
- Training progress and real-match transfer must remain separate. A drill result alone does not validate match performance.

5. Product Differentiation and Claims Boundary

The distinctive value is not the invention of every individual pickleball skill. It is the integration of assessment, diagnosis, priority, prescription, training evidence, match transfer and reassessment into a version-controlled player-development operating system.

- Acceptable positioning: integrated closed-loop system; version-synchronised app and manual; training and match evidence separated by design.
- Do not claim “world first” or “unique in the world” without a documented market and literature review.
- The ebook is also the app operating manual and coach-training manual.

6. Three-Layer Chapter Model

Each operational chapter should connect method, app use and on-court execution without changing the frozen scoring or workflow logic.

- A — Concept & Method: ability, tactical function, evidence and limits.
- B — In the App: screen path, input fields, interpretation and governed next action.
- C — On-Court Training: preparation, contact, footwork, set-up, dose, KPI, errors, pressure and match transfer.

7. App Figure and Version Control

Stable diagrams and Screen IDs are preferred to fragile screenshots. Interface changes must not silently break the manual.

- Use controlled button names and translation keys for CN/EN synchronization.
- Record app baseline, screen ID, figure version and last-verified date for every app figure.
- The current manual baseline is PB-APP-RC1.1 / pb40-v30.

8. External References and Disclosure Language

External references provide context and validation targets; they do not automatically validate PB training thresholds.

- USA Pickleball — player skill descriptions and skill matrix; development comparison only.
- DUPR — match-based dynamic rating; external match-performance reference, not merged with Validated Training Level.
- Pickleball Canada — Canadian rating environment, competition context and coach-development resources.
- NCCP coach education — decision-making, tactical intent, athlete development and safe coaching practice.
- Peer-reviewed reliability, validity and safety research — validation design support, not automatic level gates.

Fixed EN-CA Disclosure

PB 3.0–5.0 is a training-development and decision-support system. Its Validated Training Level is not an official DUPR or tournament rating. Unless a higher authority class and validation record are shown, numerical weights and thresholds are provisional coaching benchmarks intended for training diagnosis, progress monitoring and reassessment control.

Canadian and North American rules, rating relationships, privacy expectations and safety guidance must be reviewed at least annually and whenever a governing body issues a material change.
